Authors:	Schmidt, B.M.		
Journal:	Orbit	Volume:	31
Number:	3	Pages:	58-59

Note:

Understanding the processes of science and scientific inquiry fosters skill development in students which are essential to success, including teamwork, communication, problem solving, critical thinking and leadership as well as literacy and numeracy skills. How to integrate science into the education curriculum is a challenge, drawing from a variety of resources, including an organization like Let's Talk Science which focuses on the development and delivery of educational programs for youth and their educators through a variety of programs and "hands-on means minds on" components. The ultimate goal of Let's Talk Science is to ensure all Canadian children experience high-quality science education so as to appreciate and evaluate the impact of science in their lives
