Type of Publication:	Article	Keywords:	context, base knowledge, constructivist theory, learning, experience, knowledge, understanding
Authors:	Elworthy, A.		
Journal:	Interaction	Volume:	18
Number:	2	Pages:	28

## Note:

We learn by constructing our own understandings based upon our experiences, which are unique and thereby make our understandings unique . New information that we receive is compared to what we know from our experiences: what we learn is affected by what we already know. We apply what we know to a new situation: if new information does not fit with what we know, we may have to adjust how we think about the initial information and find where misconceptions occurred.
