

ECEs: Helping Children to Find Science Everywhere. Interaction 18(2): 25-26.

Research Area:		Year:	2004
Type of Publication:	Article	Keywords:	exploration, early-years, education, inquiry, science for young children, learning, play, science literacy, development, early childhood educators, base knowledge, constructivist theory, preschool, children, experience, discovery, ECE
Authors:	Quinn, M.		
Journal:	Interaction	Volume:	18
Number:	2	Pages:	25-26

Note:

Science is everywhere around us so it is important to instill positive attitudes about science in children, though we often miss the opportunities to explore science learning. To explore science learning with children, Early Childhood Educators and other educators need to remember to ask questions then elaborate and explain what happens in everyday occurrences: search for the basics and do not be intimidated by complicated explanations. Giving preschoolers opportunities to explore the world around satisfies their curiosity and aids in their skill development - verbal explanations should emphasize basic concepts, with enough information to satisfy curiosity, without confusing them with too much detail, while also sparking interest to learn.
