

## Bubble-Wrap and Orange Juice. ScienceLink 26(2): 6.

Research Area:		Year:	2005
Type of Publication:	Article	Keywords:	exploration, science writing, early years, education, Wings of Discovery, inquiry, learning program, discovery, science for young children, Lets Talk Science, learning, play
Authors:	Taylor, K.		
Journal:	ScienceLink	Volume:	26
Number:	2	Pages:	6

### Note:

Quality learning experiences are important for young children, who are scientists by nature: they ask questions constantly, keenly observe, explore, experiment and draw their own conclusions. The love of learning in children and their willingness to be open-minded in trying new things can renew learning and love of science in adults. Writing for children requires getting to know how children perceive the world, experimenting and exploring topics, understanding cognitive, physical and social development, understanding learning styles and accurately portraying science concepts in a developmentally-appropriate manner
